

## FAMILY NAME FILE INFORMATION & INDEX

The heart of our collection here at the Commission is our Family Name Files. These files serve as both primary and secondary sources for genealogist and hobbyist trying to learn more about their past. The files are generally broken down by family name except in cases where enough material is available that it can be divided out by proper name. Contained in these files, you will find, copies of court records, birth, death, marriage and school announcements, correspondence relating to the family line, pedigree charts, newspaper clippings and general biographical information.

The Family Group sheet below is a sample from our Family Name Files. Indicated are notations that will assist you in your research. The layout of the page is important. The patriarch of the family will be listed first with birth and death references listed to the right. Next you will see the notation for the wife and marriage date (if known). To the right will be the wife's birth and death information. Children are listed below the parents. Their birth and death information will be listed to the right.

In the upper left corner and along the left edge of the page, you will notice a notation that references an Equity roll (# 143). These sites the original, primary source for the information given. The second key reference is above the father's name and is listed as "Brinkley." This is a reference to the paternal line and references the father of the man listed.

So from the sample on the left, we know that Booka Gandy married Delilah Edwards and that Booka's father was Brinkley and the information for this record was noted in Equity # 143.
